

# Ellipse radiators

The unique curved column concept that sets a new design standard

Ellipse's gently curved columns offer two design variations.

Models are available with all-curved columns facing outwards, or they are presented alternately outward and inward to create a soft wave effect. You have further choice of size and output options, in white or any of a wide range of finishes to special order.

**Finished in White (RAL 9010) as standard - other finishes available to special order. Manual or thermostatic valve kits available.**
