practical packaging that will keep the product pristine, right through to installation. This clever packaging design allows installation to be completed prior to removal.

**APPLICATIONS**

Stelrad radiators are suitable for two pipe installations. For single pipe applications, it is advisable to use diversion tees in the pipework, as this will assist in obtaining design performance from the radiators. Although our radiators are suitable for Microbore pipework, the back tappings make them unsuitable for twin entry valves.

**INSTALLATION**

Everything required for installation can be found within each radiator’s packaging. Brackets are of a strong design, with top and deep slots, which facilitate easy and secure installation. Plastic inserts seat the radiator precisely on the bracket minimising expansion and contraction noise. The neat nickel-plated plug and vent provide a watertight joint, whilst complementing the superior finish. To facilitate easy one-off replacement, nickel-plated brass extension pieces are also available, complete with sealing washer, in 20mm, 30mm and 40mm options. Recommended height from the floor to the base of the radiator is 150mm minimum. This allows adequate airflow when the radiator is placed on the bracket.

**CAUTION**

When designing for domestic systems we recommend that the Stelrad radiators are only used in heating systems complying with British Standard Code of Practice for Central Heating for Domestic Premises BS EN 12828:2003 and BS EN 12831:2003. Single feed, direct cylinders are not recommended as should interchage of water occur, fresh aerated water would enter the heating system, resulting in corrosion.

**WATER TREATMENT**

On completion of the installation, the system should be properly flushed and filled in accordance with the British Standard Code of Practice BS 7593:2006 for the Treatment of Water in Domestic Hot Water Central Heating Systems, Part L of Building Regulations and Good Practice Guidance for Scotland. After installation of a new Stelrad radiator the central heating system should be cleaned and flushed with cleaner to remove existing contaminants, flux residue and other installation debris which, if left, can cause damage to the new radiator. Afterwards, treat the system with an inhibitor to ensure long term protection against corrosion and limescale.

A comprehensive range of quality chemicals including inhibitors, cleaners, leak sealers and noise reducers that protect and maintain central heating systems can be obtained from:

**TECHNICAL INFORMATION**

**EXTRA PERFORMANCE TO GUARANTEED STANDARDS**

Stelrad combine the most sophisticated production resources in Europe with substantial investment in testing and verification of performance data - which has helped us create high output radiators delivering heating performance that exceeds expectation.

**MORE CHOICE FOR APPLICATION FLEXIBILITY**

A range of models provide extra using flexibility and covers a multitude of application requirements, including those where there are installation difficulties or where wall space is at a premium.

**SUPERB QUALITY FROM DESIGN TO INSTALLATION**

Our radiators are specifically designed to minimise any movement, providing a tight, professional fit that will remain in place, even after storage, transit and installation. Convectors are precision welded directly onto the waterways for greater efficiency and economy, with flexible connection options for the highest of commercial and domestic application specifications.

Stelrad radiators are manufactured under ISO 9001 quality systems in the UK and every one comes wrapped in robust, practical packaging that will keep the product pristine, right through to installation. This clever packaging design allows installation to be completed prior to removal.

**COMPUTER GENERATED IMAGES (CGI)**

CGI’s are for illustration purposes only.

**STEEL PANEL RADIATORS**

if a steel panel radiator is placed in a high humidity area, warranty reduces to 12 months.

**BRANDED STICKER**

Please note, all premium panel products will have a Stelrad branded sticker on.

**APPLICATIONS**

Stelrad radiators are suitable for two pipe installations. For single pipe applications, it is advisable to use diversion tees in the pipework, as this will assist in obtaining design performance from the radiators. Although our radiators are suitable for Microbore pipework, the back tappings make them unsuitable for twin entry valves.

**TWO COAT PAINT PROCESS**

Each Stelrad radiator is subjected to a multi-stage cleaning process before the paint is applied. This involves several rinsing stages, including an iron phosphate and demineralisation rinse.

The first coat of paint is applied by electrophiorsis and the radiator is then stoved and cooled. The second powder coat is applied and the radiator goes through a final curing stage. It is then allowed to cool, prior to packaging.

The Stelrad STARS Basic & Advanced Heatloss Calculator contains an inbuilt U value calculator.

Save time and effort by using the Stelrad STARS program - the perfect solution for accurate sizing and design flexibility.
